

aquatherm black system

comfort heating and cooling

Advantages of the aquatherm black system:

- The **aquatherm black system** for room climate control (**heating** and **cooling**) is all “**Made in Germany**”.
- Based on radiant heating, comparable to the sun. Flow temperatures can be low (**15°C - 17°C** and **25°C - 35°C**), as the heating surfaces (walls, floors or ceilings) are relatively large, compared to small hot surfaces, such as room radiators.
- The lower heat source creates no draughts or raising dust.
- Health; asthmatic and allergic people have a primary problem with raising dust. As the walls are directly heated, there is no condensation and consequently no formation of mould.
- Safe for the elderly and children; hot exposed radiators can be harmful.
- Energy saving in operation.
Rule of thumb: Reduction of room temperature by 1°C = 6% energy saving!
- Low air temperature creates a natural and pleasant climate.
- No loss through windows.
Heat radiation is reflected by glass and given back to the room.
- Noiseless.
- Greater architectural design freedom.
- Fast and easy installation. The system is extendable.
