We set the standards for quality and reliability!

Pipe System

Pipe system for chilled, hot and industrial applications

aquatherm

aquatherm-climatherm

The climatherm-pipe system includes all elements for the pipe system installation for chilled, hot fluid and various industrial applications.

The production process, developed by aquatherm, combines a special fiber mixture with the material polypropylene.

The result of this innovative composite-technology is an unique compound of the material-components.

Corrosion-resistant

climatherm stops corrosion damages!

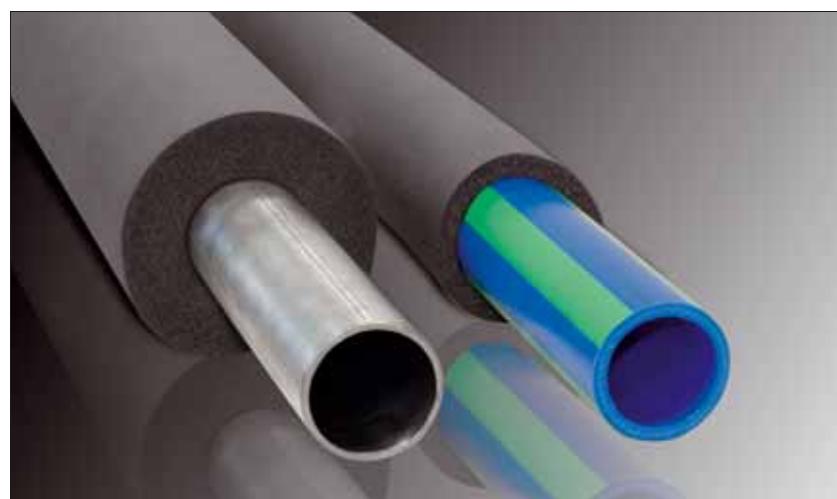

Air conditioning systems [problems with dew-point] installed with steel pipes especially are affected by corrosion at the outer surface of the pipes. climatherm is manufactured from 100% corrosion resistant materials which increase the life-time of air-conditioning pipe systems considerably.

► Corroding steel pipe

Insulation against energy loss

Compared to metal pipes climatherm-pipes require a considerable thinner insulation.

Advantages of the climatherm-system

Characteristics

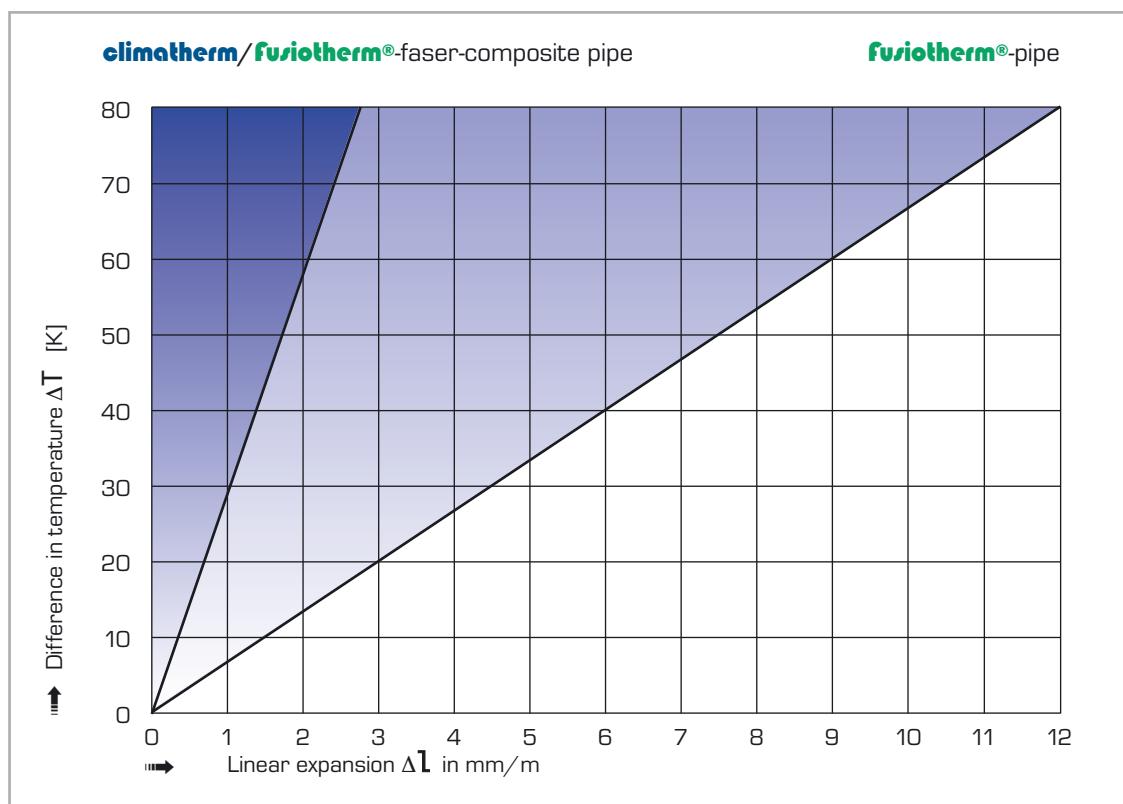

- ▶ resistant against chemicals
- ▶ high environmental compatibility
- ▶ high impact rate
- ▶ less pipe friction
- ▶ heat/sound insulating characteristics
- ▶ no flow noise
- ▶ high stability
- ▶ very good welding properties
- ▶ heat stabilized

Linear expansion

Composed of fusiolen PP-R C and a special faser filling - integrated as middle layer in the material PP-R - climatherm-faser composite pipes stand the test of time excellently as economic, resistant and innovative pipe-technology, world-wide.

- ▶ linear expansion reduced (see graph)
- ▶ flow increased by 20%, with the same loading capacity, due to bigger inner diameter
- ▶ high stability and load capacity
- ▶ easy handling: simply cut and weld!

System technology

Fields of application

climatherm-faser-composite pipes have been developed especially for applications beyond the potable water installation. Compared directly to the conventional PP-R pipe systems the climatherm-faser composite pipe has a higher flow rate. climatherm-faser composite pipes are available in diameters from 20 mm - 250 mm.

Fields of application of the climatherm-pipe system:

- ▶ heating system construction
- ▶ climate technology
- ▶ chilled water technology
- ▶ swimming-pool technology
- ▶ chemical transport in consideration of the material durability
- ▶ rainwater application
- ▶ irrigation
- ▶ compressed air systems
- ▶ underfloor heating systems
- ▶ application in the field of ship building
- ▶ geothermal

Fusion technique

Socket welding technology

By the fusion of pipe and fitting the plastic melts to a homogeneous material unit. Pipe and fitting are quickly heated by means of specific welding tools and then just joint: finished!

With the fusion technique of aquatherm you will easily get a permanent, leakproof connection.

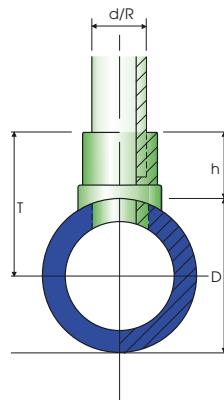

Weld-in saddle technique

Branches can easily be made with weld-in saddles, even at a later stage of installation. By using weld-in saddles material and time is reduced.

1. Drill the pipe with the aquatherm-special borer (Art.-No. 50940-48).
2. Heat up the weld-in saddle and the pipe.
3. Join the weld-in saddle and pipe permanently.

The result: a permanent corrosion-free connection!

climatherm-faser composite pipe

Material: fusiolen CGF

Pipe series: Art.-Nr. 2070708-2070712 = SDR 7,4
Art.-Nr. 2070112-2070138 = SDR 11

Form supplied: 4 m straight length, also in coils

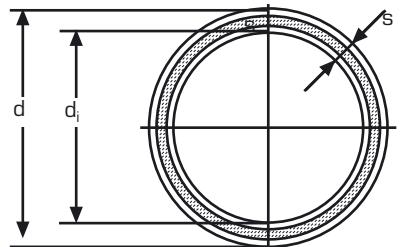

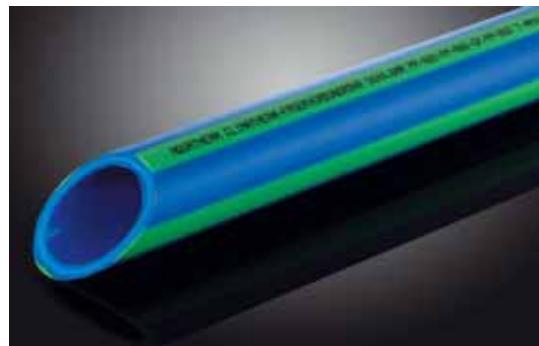

Packing unit: PU in meter

Colour: blue / 4 green stripes

Field of application:

For air-conditioning, heating and industrial pipe systems with a maximum pressure of 10 bars and operating temperatures from -20° C up to +90° C.

Please regard the table of permissible working pressures on the next page.

Further pipe types:

climatherm-pipe SDR 11 without integrated fiber layer, as well as climatherm-pipe SDR 7,4 with UV-barrier layer. You find these types in the current fusiotherm-catalogue.

Art.-No.	SDR	Pipes		Diameter mm	Wall thickness mm	Internal diameter mm	Water content l/m	Weight kg/m	DN
